

NK Series Vacuum Isolating Valve

• NK系列真空隔离阀

主要特点及用途

- 本系列阀门主体采用铸锻结构，具有平行双密封副半强制双向密封，密封面到位运动和楔形快楔紧运动分步作用实现零泄漏。
- 密封面运动摩擦力小、启闭轻便，而且密封面磨损有自动补偿功能。
- 结构简单、紧凑、检修方便，使用寿命长。
- 阀盖填料室设有真空密封结构，具有自胀压紧作用，并且各接各面采用高强膨胀材料密封，使系统与大气完全隔离，具有很好的系统气密性。
- 本系列阀门连接形式分法兰、焊接两种，驱动方式有手动、电动两种。

该阀门适用于工作温度≤425°C和550°C，工作介质为水、蒸汽或空气的管路上，作为启闭装置；尤其适用于火电厂汽机冷凝和真空负压系统，起真空隔离密封作用。

Chief Structure Features And Usages

- The main body of this series valve uses a casting and forging structure and has a dual-direction seal of parallel secondary semi-forced dual sealing and the motions of both the sealing face to its due position due position and the tapered block to wedge-up are separated to have zero leadage come true.
- The sealing face is of a small frictional force If motion, lightly opened and closed and has a self compensation function for wearing.
- Simple and compact structure easy to more than 10 years of long duration.
- A vacuum sealing structure is set in the filling chamber on the valve cover, which has the action of self-expanding and impacting, the joint faces are sealing with the expansive material of high strength to completely isolate the system from air.
- Two connection ways of flange and welding, two ways to drive of hand-and electric-operation. The valve can be used as the open & close device for the pipelines under the working temperature≤425°C and 550°C and the working medium of water, steam or air; especially suitable to act as the vacuum isolating sealing for the system of steam turbine's condensation and vacuum negative pressure in steam power plants.

阀门结构型式

NKJ61型真空隔离截止阀；NKZ44, NKZ64型真空隔离闸板阀

制造验收技术标准

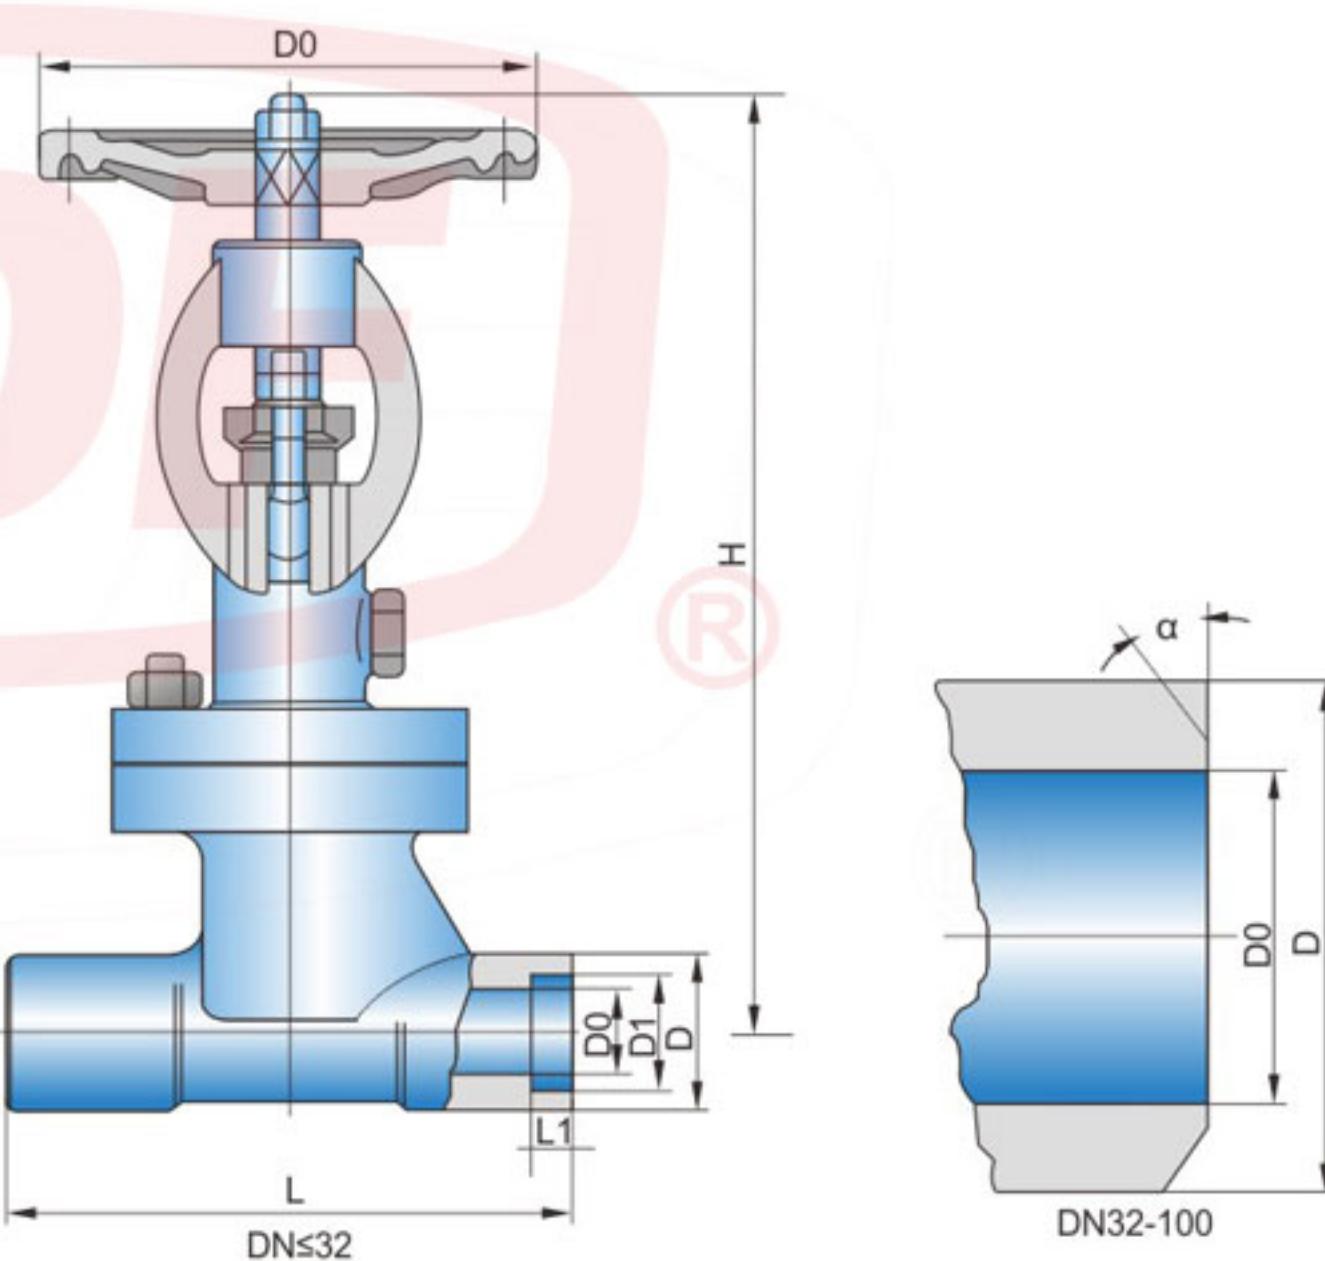

- 制造验收技术条件参照GB/T 12234, GB/T 12235.
- 阀门结构长度按GB/T 12221.
- 阀门法兰尺寸按JB/T 78-79, GB/T 9112-9124.

Valve Ctrucure Type

Model NKJ61 Vacuum isolating stop valve; Model NKZ44 and NKZ64 Vacuum isolating gate valves.

Manufacture And Acceptance Standard

- Manufacture, acceptance and technical conditions per GB/T12234, GB/T12235.
- Face-to face dimensions per GB/T12221.
- Flange sizes per JB/T78-79, GB/T9112-9124.
